

RIGWATCHER 

Rigwatcher

Helicopter-portable offshore lighthouse

Rigwatcher is a helicopter-portable and solar powered lighthouse for marking decommissioned offshore platforms.

The core unit can be fitted with varying payloads, such as visual aids to navigation, racon, AIS and communication components, **radar and surveillance systems** depending on project specification.

Rigwatcher is designed for continuous use in permanent marking applications, such as on top of concrete gravity legs left behind after dismantling the platform. Rigwatcher unit can also be used as a temporary marking for cold stacked platforms, therefore minimizing the cost and complexity of AtoN equipment for platform decommissioning.

- Redundant solar power system for securing uptime
- Helicopter-portable unit can be deployed and picked up at unmanned sites
- Tested for vibration & shocks according to offshore standards
- High-quality and durable Sabik lanterns for visual AtoN payload

Offshore Decommissioning Solutions

RIGWATCHER 

Compact single-lift solution

Lifting hook to facilitate helicopter or crane lift

Customizable payload as per project requirements

Bird deterrent spikes to prevent roosting

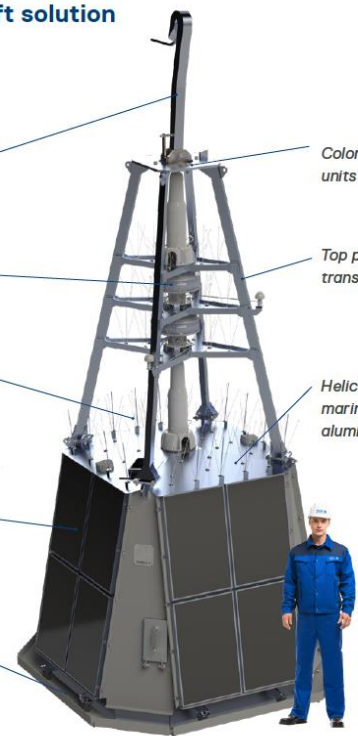

Total of 800 W solar panel capacity with dual redundant charger arrangement

Docking pin and aiming rings available to assist helicopter deployment

Color coding for identifying units from the air

Top part removable for transportation to lift site

Helicopter portable marine-grade aluminium frame
